

Abstract of the Disclosure

An adhesive tape (24), a sealing element and a process for producing the sealing element, preferably in motor vehicles. The sealing body is made of silicone, and a first self-sticking adhesive surface (18), which has at least in part a silicone cement, of an adhesive tape (24) is applied to the sealing body. The adhesive tape (24) is provided with a second self-sticking adhesive surface (20) for attachment to the application site. There is an adhesive layer (32) between the carrier element (14) of the adhesive tape (24) and the silicone cement of the first adhesive surface (18).
